Overview:

This webinar will explain

Ransomware including new, more treacherous varieties used by cyber-criminals to attack the Healthcare Industry

HIPAA Rules that apply to Ransomware attacks

“Social Engineering” tricks criminals use to sneak Ransomware into Electronic Information Systems

What to do if your organization suffers a Ransomware attack

Best practices to:

Prevent

Prepare

Respond;

and Recover from Ransomware Attacks

Why Should You Attend:

Healthcare is the biggest target for Ransomware attacks in 2017. New types of Ransomware are particularly dangerous. They not only lock up your information system – they steal Protected Health Information (PHI). Covered Entities and Business Associates of all types and sizes are

www.nyeeventslist.com

prime Ransomware targets because disruption of healthcare operations, even for a brief period, can result in catastrophic harm to patients. Criminal hackers don't need to be sophisticated technology to mount a Ransomware attack – they simply trick employees to open a “phishing” email or click on an Internet link. Ransomware is the easiest and safest way for cyber-criminals to extort money from the Healthcare Industry.

A Ransomware attack on a Covered Entity or BA that encrypts PHI is presumed to be a HIPAA Breach according to the U. S. Department of Health and Human Services (HHS).

Areas Covered in this Webinar:
